There are plenty of errors in the syslog that I would like to have someone else investigate. Hi, Nice article. I like this tool. I used it and the router syslog up to now. And when I have some problems, I read here how to fix it. As this tool runs in the system tray area, I did not get any notification that a new update is available. But the tool still uses the last files I stored before. Does this mean the update is available and I only have to restart the router to install it? Best regards, Hi, The update gives you the opportunity to continue using the tool, even after you have updated it. When you have the latest version of the tool on your PC, you can add the.DLL file from the old version of the software and it will work. Just in case you want to keep using the old software.I'm making a two player game, and I need to know the ideal range of enemy health. The best I can find is At around 150hp they are likely to just die to a single hit. At around 150hp they are likely to just die to a single hit. If you plot the amount of health vs enemy HP when this is the case, you get an almost flat line. I need the line to drop off though. Note that I am using the d
